Summary Flavius Josephus (part 3)

Imitation is based on the perception-action mechanism which combines the visual kinematic characteristics of an action perceived with the motor kinematic characteristics of the action itself Prinz, When a child imitates another person there is a discharge on the mirror neurons Gallese, Those neurons are brain cells which fire when a subject copies an action or simply observes someone performing some actions Rizzolatti, The activation of these neurons helps children to understand other actions and, therefore, they play an important role in learning, how children learn about the world, how they act and how they play Stagnitti, Here, however, imitation is being considered not as a copy but as a reproduction of an action after an observation the way that the observer understood and learned the mentioned action, in an attempt to feed social interaction. Its sweet, spicy and delicious.
